

The bearing cup holders are held in place with 0.7 rod. If you bend the ends a little rather than gluing in place this allows for easy removal of wheels. The 3 holes allow for height adjustment.

The two longer pieces of rod are for the tie rods between the axles

Parts that need gluing will easily fix using superglue or Epoxy Resin.

I use Halfords grey primer and for O-16.5, Hornby 14mm disc wheels.
